SUMMARY

Software engineer who builds and runs production systems end to end: Go and Python services, PostgreSQL, billing and authentication, and the infrastructure underneath them. Owner of PRISM USA LLC. U.S. Army combat veteran.

TECHNICAL SKILLS

Languages	Go, Python, SQL, TypeScript, JavaScript, Lua, Bash
Backend	REST APIs, Stripe, JWT/JWKS, OAuth/OIDC, background processing, webhooks
Data	PostgreSQL, Redis, Kafka, Elasticsearch/OpenSearch, ClickHouse, MariaDB
Infrastructure	Docker, Kubernetes, nginx, Cloudflare, Linux, Terraform, Salt, GitHub Actions, Control Plane, Triton
Observability	Prometheus, Grafana, VictoriaMetrics, Sentry
Frontend	React, React Native, Vue
AI development	Claude, Codex, Cursor, ChatGPT; LLM, speech-to-text, and text-to-speech APIs

PROFESSIONAL EXPERIENCE

Software Engineer (Contract)

September 2026 - Present

Sovren Technologies, Inc., through PRISM USA LLC | Parler / PlayTV | Remote / Kokomo, IN

Engineering Manager

February 2025 - September 2026

Parler Cloud Technologies LLC

- Built Go APIs for Stripe Premium subscriptions and creator memberships, including durable checkout state, idempotent payment requests, and webhook recovery.
- Implemented identity-provider token exchange and account linking for Parler and PlayTV, including JWT signature, issuer, and audience validation with JWKS caching.
- Centralized tenant-aware authorization for private accounts across posts, comments, stories, search, and trending.
- Migrated email and SMS workflows from Laravel to Go background workers, with tenant-specific templates and Mailgun/SMTP delivery.
- Reworked a PostgreSQL onboarding migration to avoid updating approximately 15 million account rows while preserving activation behavior.
- Instrumented Go APIs with Prometheus and Sentry to track errors and route latency, distinguishing native Go requests from proxied Laravel traffic.
- Built an audited PostgreSQL command-line tool with read-only credential isolation, transaction controls, query timeouts, and JSON/CSV output.
- Developed shared React and React Native features, including community chat with reconnect recovery and Premium administration tools.

Owner and Engineer

July 2024 - Present

PRISM USA LLC | Kokomo, IN | raymond@prsmusa.com | prsmusa.com

- Built and operate an AI phone receptionist for small businesses that screens and qualifies callers, books call-backs, and transfers live calls (Python, SignalWire, cloud speech and LLM services).
- Designed the call path so calls never depend on the database: settings are cached with an on-disk snapshot and call records go through a local outbox, so a database outage cannot drop a call.
- Built the customer dashboard (React, TypeScript, FastAPI, PostgreSQL) with Google sign-in, role-based access, and an audit trail.
- Run the company's services: project management (Kaneo), a Go Bible reader API with OpenSearch full-text search, a help desk, a paste service, and Grafana/VictoriaMetrics monitoring with alerting.
- Migrated every service from an on-premises server and VPS reverse-tunnel edge to a cloud platform behind Cloudflare and a load balancer, with nginx as the single front door and private-network backends; verified zero data loss table by table and kept a tested rollback path, a scripted disaster-recovery rebuild, and nightly backups.

Software Engineer

March 2016 - December 2024

Edgecast / Edgio (formerly Verizon Media / Yahoo)

- Created a distributed Kafka ingestion and enrichment system in Go processing approximately 10 million messages per second.
- Developed customer-facing Go and Python APIs and implemented JWT authentication with an OpenResty/Nginx proxy using Lua.
- Built distributed Elasticsearch and ClickHouse clusters totaling approximately 200 servers to support customer-facing dashboards.
- Improved configuration delivery using Redis for real-time updates and batching to increase throughput.
- Provisioned and managed more than 100 servers with Salt and Kubernetes; implemented monitoring with Prometheus, Grafana, and Slack webhooks.

Network Operations (NOC) Engineer

April 2015 - March 2016

Verizon Digital Media Services / Edgecast

- Automated global issue scans and reporting, reducing issue-detection time from one hour to 10 minutes.
- Diagnosed production server and application issues, gathered root-cause evidence, and coordinated escalation to engineering teams.

Software Engineer / Network Engineer

March 2014 - December 2014

STG Logistics

- Maintained legacy SCO Unix systems and improved network and systems security.
- Built Java reporting applications for weekly customer updates on issues and resolutions.

EDUCATION

Westwood College (Anaheim)

Bachelor of Science in Information Technology

Major in Computer Network Management | Cum Laude | Alpha Beta Kappa | May 2014

MILITARY SERVICE

U.S. Army National Guard

Sergeant (E-5), Combat Engineer

Combat veteran; Operation Iraqi Freedom deployment, Kuwait/Iraq, 2008-2009.
