SUMMARY

Software engineer who builds and runs production systems end to end: Go, Rust and Python services, PostgreSQL, billing and authentication, and cloud networking down to the kernel driver. Owner of PRISM USA LLC. U.S. Army combat veteran.

TECHNICAL SKILLS

Languages	Go, Rust, Python, SQL, TypeScript, JavaScript, Lua, Bash
Backend	REST APIs, Stripe, JWT/JWKS, OAuth/OIDC, background processing, webhooks
Data	PostgreSQL, Redis, Kafka, Elasticsearch/OpenSearch, ClickHouse, MariaDB
Infrastructure	Docker, Kubernetes, nginx, Cloudflare, Linux, Terraform, Salt, GitHub Actions, Control Plane, Triton, SmartOS/illumos, bhyve
Observability	Prometheus, Grafana, VictoriaMetrics, Sentry
Frontend	React, React Native, Vue
AI development	Claude, Codex, Cursor, ChatGPT; LLM, speech-to-text, and text-to-speech APIs

PROFESSIONAL EXPERIENCE

Software Engineer (Contract) September 2026 - Present

Sovren Technologies, Inc., through PRISM USA LLC | Parler / PlayTV | Remote / Kokomo, IN

Engineering Manager | Parler Cloud Technologies LLC February 2025 - September 2026

Parler / PlayTV

- Built Go APIs for Stripe Premium subscriptions and creator memberships, including durable checkout state, idempotent payment requests, and webhook recovery.
- Implemented identity-provider token exchange and account linking for Parler and PlayTV, including JWT signature, issuer, and audience validation with JWKS caching.
- Centralized tenant-aware authorization for private accounts across posts, comments, stories, search, and trending.
- Migrated email and SMS workflows from Laravel to Go background workers, and reworked a PostgreSQL onboarding migration to avoid updating approximately 15 million account rows.
- Instrumented Go APIs with Prometheus and Sentry, built an audited read-only PostgreSQL command-line tool, and developed shared React and React Native features including community chat.

Triton DataCenter (open-source cloud platform, Rust)

- Designed and shipped direct public IP addresses for load balancers across the stack: a new port type in the Proteus kernel networking driver (inbound-only, anti-spoofing, uplink shared safely with floating IPs) and the Rust control-plane placement, address binding, and rollout safety.
- Qualified the change on hardware: built SmartOS platform images and proved mixed-version compatibility, so hosts can upgrade without a coordinated cutover.

- Built operator address-source selection for NAT gateways and floating IPs (CLI and admin console), deliberate subnet egress with retryable enable/disable, tenant-limit overrides, and audited configuration changes.

Owner and Engineer

July 2024 - Present

PRISM USA LLC | Kokomo, IN | raymond@prsmusa.com | prsmusa.com

- Built and operate an AI phone receptionist for small businesses that screens and qualifies callers, books call-backs, and transfers live calls (Python, SignalWire, cloud speech and LLM services); calls never depend on the database, using cached settings and a local outbox for call records.
- Built the customer dashboard (React, TypeScript, FastAPI, PostgreSQL) with Google sign-in, role-based access, and an audit trail.
- Run the company's services: project management (Kaneo), a Go Bible reader API with OpenSearch full-text search, a help desk, a paste service, and Grafana/VictoriaMetrics monitoring with alerting.
- Migrated every service, as an early Triton Cloud customer, from an on-premises server and VPS reverse-tunnel edge to the cloud behind Cloudflare and a load balancer, with nginx as the single front door and private-network backends; verified zero data loss table by table and kept a tested rollback path, a scripted disaster-recovery rebuild, and nightly backups.

Software Engineer

March 2016 - December 2024

Edgecast / Edgio (formerly Verizon Media / Yahoo)

- Created a distributed Kafka ingestion and enrichment system in Go processing approximately 10 million messages per second.
- Developed customer-facing Go and Python APIs and implemented JWT authentication with an OpenResty/Nginx proxy using Lua.
- Built distributed Elasticsearch and ClickHouse clusters totaling approximately 200 servers to support customer-facing dashboards.
- Improved configuration delivery with Redis real-time updates and batching; provisioned and managed more than 100 servers with Salt and Kubernetes, monitored with Prometheus and Grafana.

Network Operations (NOC) Engineer

April 2015 - March 2016

Verizon Digital Media Services / Edgecast

- Automated global issue scans and reporting, cutting issue-detection time from one hour to 10 minutes; diagnosed production issues and escalated with root-cause evidence.

Software Engineer / Network Engineer

March 2014 - December 2014

STG Logistics

- Maintained legacy SCO Unix systems, improved network and systems security, and built Java reporting applications for weekly customer updates.

EDUCATION

Westwood College (Anaheim)

B.S. Information Technology, Computer Network Management | Cum Laude | Alpha Beta Kappa | May 2014

MILITARY SERVICE

U.S. Army National Guard (California)

Sergeant (E-5), Combat Engineer (21B) | Honorable discharge

Deployed to Kosovo (NATO KFOR) and Kuwait/Iraq (Operation Iraqi Freedom, September 2008 - July 2009). Army Commendation Medal, Army Achievement Medal, Iraq Campaign Medal with campaign star, Kosovo Campaign Medal, NATO Medal.
